

Buttock Enhancement

Buttock augmentation, or gluteal augmentation, is used to improve the contour, size and/or shape of the buttocks. This is done through the use of buttock implants, fat grafting or sometimes a combination of the two.

Buttock implants are silicone-filled devices that are surgically placed deep within the tissues of the buttock.

Buttock augmentation through the use of fat grafting involves the transfer of fat from one area of the body into the tissues of the buttocks. This technique is sometimes referred to as a **Brazilian Butt Lift**

What buttock augmentation surgery can do

- Increase fullness, roundness and projection of your butt or buttocks
- Improve the balance of your figure
- Enhance your self-image and self-confidence

In addition to buttock augmentation procedures, a buttock lift can be accomplished by the surgical removal of soft tissue.
